FRONT AND REAR AXLE

PRODUCT SHEET

# PRODUCT SHEET

The Peugeot Boxer X250/X290, Fiat Ducato X250/X290, Citroën Jumper X250/X290 is available with a full 4-corner air suspension system for the front and rear axle. The Boxer X250/X290, Ducato X250/X290, Jumper X250/X290 is an ideal candidate for the use of air suspension systems. Our VB-FullAir 4C air suspension system is not just available for new vehicles, it can also be mounted in used vehicles.

## VB-FullAir steering

The VB-FullAir system comes with an electronic control unit called VB-ASCU (VB-Air Suspension Control Unit). This unit automatically monitors and corrects the vehicle's ride height. This ongoing process of monitoring and correction – which is unaffected by the load being transported – ensures safer vehicle handling and increases comfort.

## Software

The electronic control unit is compatible with the vehicle electronics and ESC system of the Peugeot Boxer X250/X290, Fiat Ducato X250/X290, Citroën Jumper X250/X290. Thanks to the range of different software variants, the VB-FullAir system can be adapted to specific vehicle applications. The use of the Internet helps to provide support across the globe.

## Changing the height

The entry/loading platform height can be raised or lowered when the vehicle is at a standstill, allowing passengers to comfortably enter and exit the vehicle and goods to be conveniently loaded and unloaded.

## Benefits of VB-FullAir:

- Constant ride height
- Increased comfort
- Better driveability
- Increased stability
- Comfortable transportation of passengers
- Kneeling function for allowing passengers to enter and exit the vehicle
- Better protection for fragile/delicate goods
- Kneeling function for loading and unloading goods
